Cal OSHA Carcinogen Report of Use  (5209)

Name: ____________________________  Room used: __________  Date: __________

I am using (circle all that apply):

- 2-acetylaminofluorene
- 1,2-dibromo-chloropropane
- 1,3-butadiene
- 3,3'-dichlorobenzidine (and its salts)
- 4,4-methylene bis (2-chloroaniline)
- 4-aminodiphenyl
- 4-dimethylaminoazobenzene
- 4-nitrobenzophenyl
- acrylonitrile
- alpha-naphthylamine
- arsenic (inorganic)
- asbestos
- benzene
- benzidine (and its salts)
- beta-naphthylamine
- beta-propiolactone
- bis-chloromethyl ether
- cadmium (any compound)
- chromium VI (any compound)
- ethylene dichloride
- ethylene oxide
- ethyleneimine
- formaldehyde
- lead (any compound)
- methyl chloromethyl ether
- methylene chloride (dichloromethane)
- methylenedianiline (MDA)
- N-nitrosodimethylamine
- vinyl chloride
- I do not use any of these chemicals.

Briefly describe the process which workers are exposed to carcinogens:

________________________________________________________________________________________________________________________

What quantities are used per experiment?________________________________________________________

What is the largest size reagent bottle of listed carcinogen used? (500g, 1gal, etc.)________________________________________________________
Explain exactly where in the room the carcinogens will be used. (fume hood number, left bench, etc) ________________________________________________________________

Are any operations done outside a fume hood? (Dispensing, weighing, etc.) Explain.  
______________________________________________________________________________  
______________________________________________________________________________  
______________________________________________________________________________  

Number of employees affected? (Consider students employees) _______________________
