Video Conferencing at Home

Effective remote teams require open online collaboration. Video conferencing tools allow audio/video meeting and screensharing to facilitate communication. Understanding how video conferencing tools work with knowledge of microphone and camera options will facilitate you in your continued success with the team. Sound and voice quality may be an issue while you are working from home, use these suggestions to improve voice quality, streamline communication, and improve efficiency.

Headphone, Headset

In addition to the microphone and speakers already built into your computer, headsets may be wired or wireless (Bluetooth enabled). Headsets and/or earbuds reduce environmental noise and/or distractions, and improves audio reception. The following represent 3 examples of wired headsets/earbuds.

- Wired Apple ear buds
  $18.29 Target

- Logitech H390 Noise-Canceling
  $24.99 Best Buy

- Beats Ep Wired Headphones
  $79.99 Amazon

- USB Jack Adapter
  $14.99 Amazon

Audio/Video Connection Options

- Plug the headset wire into your laptop/computer portal. If you are running newer version of Windows, you will immediately receive this message. Make the appropriate selections as seen below and click ‘ok’.

- Wireless headsets and ear buds may also be used with your computer and/or laptop. Many of us have earbuds that we also use with our phones. These will work with your work computer as well if Bluetooth is enabled. Here are some examples:

  - Logitech H600 Wireless Noise-Canceling
    $49.99 Best Buy

  - JBL Wireless Active Noise-Canceling
    $99.95 Office Depot

  - Apple AirPods Pro Active Noise-Canceling
    $249.99 Best Buy, Target

  - If using Bluetooth, go to computer Settings and select Bluetooth & other devices.
  - Make sure Bluetooth is enabled as shown, select the + to Add Bluetooth or other device
  - Press the button on your headset to pair with your computer.
Telecommute Tips: Video Conferencing

Cellphone, Telephone
Your cellphone or telephone can be used to dial-in to a zoom video conference. From a landline, you will be able to hear/share audio. From a cellphone with a camera, you will be able to hear/share audio and video.

- Try to set your cellphone against something so you free your hands and retain a neutral neck during the meeting. Do not cradle your phone between ear and shoulder.
- Use a headset or headphones to improve sound quality in a shared space. If you are not in a shared space, putting the phone on speaker would be a good option to help maintain neutral neck and shoulders.

External Camera & Microphone
External webcams provide a higher resolution and crisper sound than the integrated camera and microphone on your computer, which may be a better option for individuals that are teaching or presenting frequently during telecommute. They easily attach to your monitor and typically require connection to a USB port on your computer with an included cable.

- Logitech C270 1 MP
  - $40 Staples or Office Depot

- Logitech C310 1 MP HD
  - $48 Staples or Office Depot

- Logitech C920S Pro HD 15 MP
  - $69.99 Staples or Office Depot
